

Lab Work

1. Sum of Array Elements:

Write a program to find the sum of all elements in an array.

2. Average of Array Elements:

Calculate and print the average of elements in an array.

3. Largest Element in Array:

Find and display the largest element in an array.

4. Smallest Element in Array:

Write a program to find the smallest element in an array.

5. Reverse an Array:

Create a program to reverse the order of elements in an array.

6. Search Element in Array:

Implement a program to search for a specific element in an array.

7. Even and Odd Elements:

Classify and count even and odd numbers in an array.

8. Sort an Array:

Implement a program to sort elements in an array (you can use different sorting algorithms).
